August 15, 2017

Data Analysis

Data Prep

Descriptives

Participants: 85

Mean Age (in Months): 60.5 (43 4-year-olds, 42 5-year-olds)

Gender: Males: 38 Females: 47

Group Differences building the model

Group differences predicting ToM performance

There are differences between ages groups and their performance on ToM tasks: Age is included in future models.

There are differences between task order and ToM performanc: Task Order is included in future models.

There are differences in working memory performance (in both Corsi block task and word span task) between task orders and age. There are no differences between gender or experimenter.

```
## Warning in data.row.names(row.names, rowsi, i): some row.names duplicated:
## 2,3,4,5,6,7,8,9,10,11,12,13 --> row.names NOT used
## Computing correlation using pearson-method with pairwise-deletion...

Computed correlation used pearson-method with pairwise-deletion.

Is there a difference in WM performance between belief, reality and PAR reasoners controlling for age, and task order?
